

Lab: Signal

1. **sigdemo1.c**

Modify **sigdemo1.c** program so that it asks if the user really meant to kill the program.

```
hello
hello
        Interrupted! OK to quit (y/n)? n
hello
hello
        Interrupted! OK to quit (y/n)? y
$
```

2. **vtimel.c**

Recode **play_again3.c** so it uses the timeout feature in the driver.

- Assigning `s.c_cc[VTIME] = 20` sets the timeout for the driver to two seconds.
- Refer to man page :
\$ man termios
